

01 — CONCEPT & INSPIRATION

Vanguard Audio sits between two ideas that don't usually share a shelf: the cold precision of machined metal, and the warmth of a driver tuned by ear.

We built the identity around Symbol B, a dial that reads as both a listening control and a target. Tuning is aim.

DIRECTION — MACHINED MINIMALISM

VANGUARD
AUDIO

● **TYPOGRAPHY**

Space Grotesk carries the structure, JetBrains Mono carries the specs, the same split the product itself makes between industrial design and precision engineering.

● **LOGO**

Symbol B repeats at every scale, from the app icon down to the earcup engraving, so the mark never has to be reinvented per surface.

● **COLOR**

Graphite and Char form the base. Brass is the only accent. One accent color forces restraint instead of decoration.

● **PACKAGING**

The box stays dark and minimal so it reads as a technical instrument case, not a retail gadget box.

● LANDING PAGE

Hero-first, one CTA, spec strip directly under the fold so a visitor knows what this is within seconds.

● ACOUSTIC CRAFT PAGE

The driver cross-section is treated like an exhibit label, not a spec sheet.

● COLLATERAL

The earcup engraving was chosen over a retail booth because it puts the brand mark on the product itself, not just around it.
